

StaticSure Portable Static Monitoring Unit

KEY BENEFITS

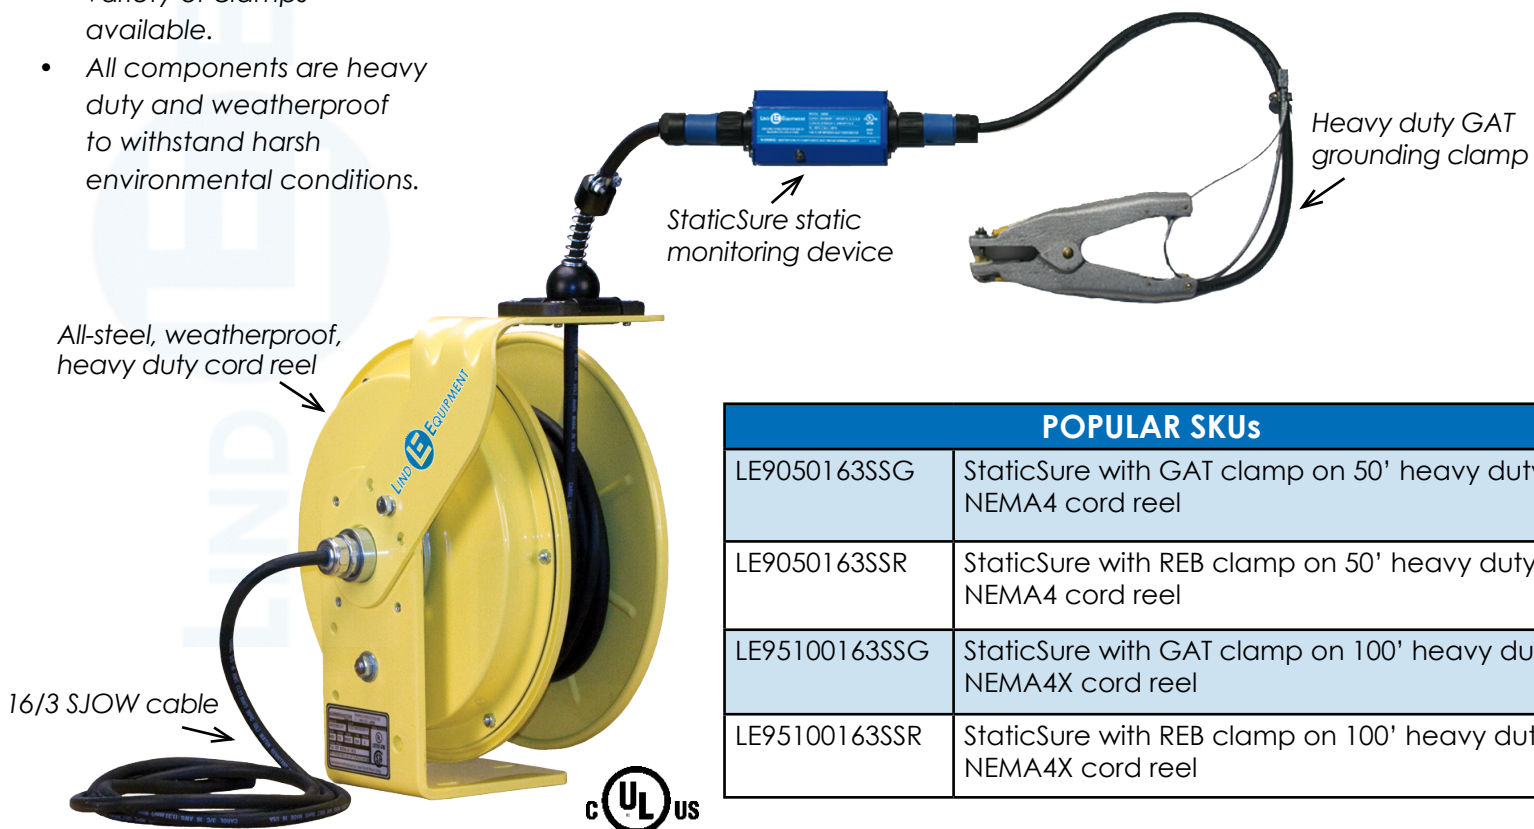

- Ensures safety of people and property
- Complies with Canadian Fire Codes, NFPA 77 & API RP2003
- Modular design allows for quick assembly and repair.
- No battery changes means less down time and more cost savings.
- Conveniently store long lengths of cable safely out of the way.
- Custom lengths and variety of clamps available.
- All components are heavy duty and weatherproof to withstand harsh environmental conditions.

StaticSure is now available on a custom length, heavy duty cord reel which is ideal for truck and railcar loading/unloading, aircraft fueling and vacuum truck operations.

Any transfer or mixing of flammable liquids or solids generates a static charge that has the potential to cause explosions. This is why all North American Fire Codes require operators to drain this static safely. But how do you know if you have a proper system in place?

The StaticSure device alerts you if an improper static bond or ground is in place, warning you before a problem can start.

StaticSure is an intrinsically safe portable static monitoring device designed to help you comply with safety regulations and maintain a safe working environment. When used with proper bonding and grounding clamps and cables, StaticSure helps to ensure that a static bond has been achieved prior to handling flammable materials.
